

WATER TREATMENT

SOLIDS REMOVAL

Solids handling system designed to work in conjunction with washing or other solid saturated water systems. This system can be sized and implemented to produce clean recirculated water where solids removal is required. The system uses low horse power and leaves a small footprint.

Cost saving potentials include:

- Pumping dirty water long distances
- Wear and tear on pumps and piping
- Expensive clean out of pits, clarifiers, and other water treatment systems
- Man-Power (fully automated)
 - lower water consumption
 - lower power consumption

Soilds Extraction System with Boss Separators Technology

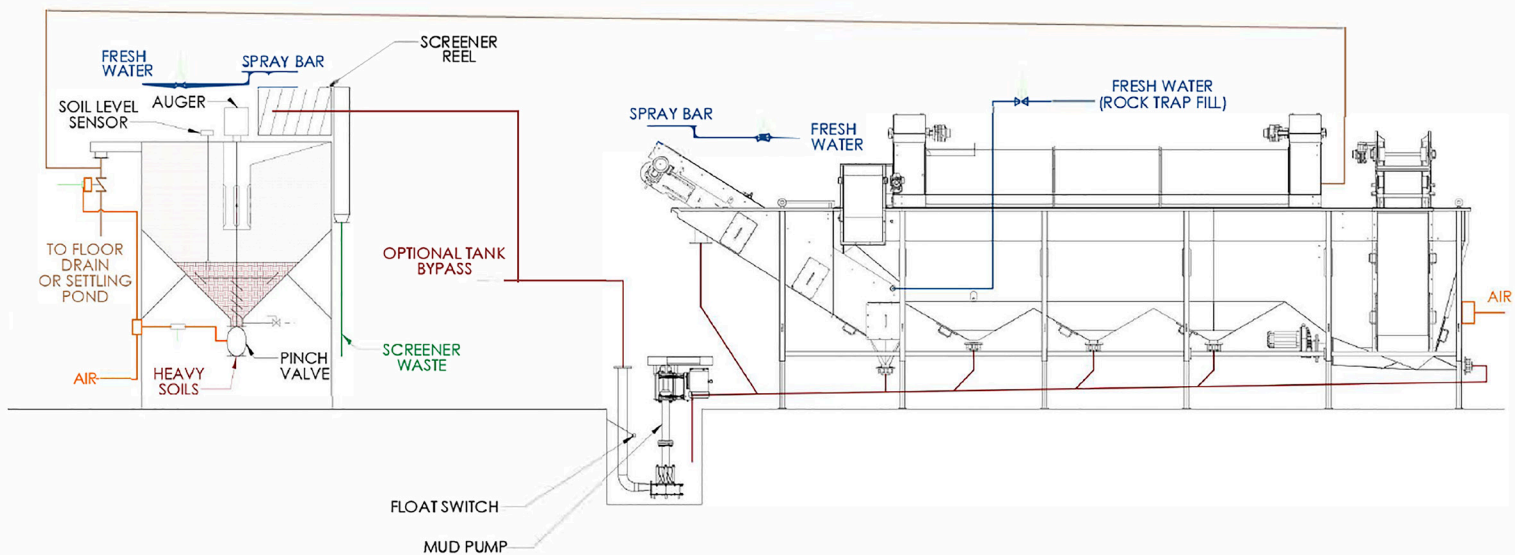

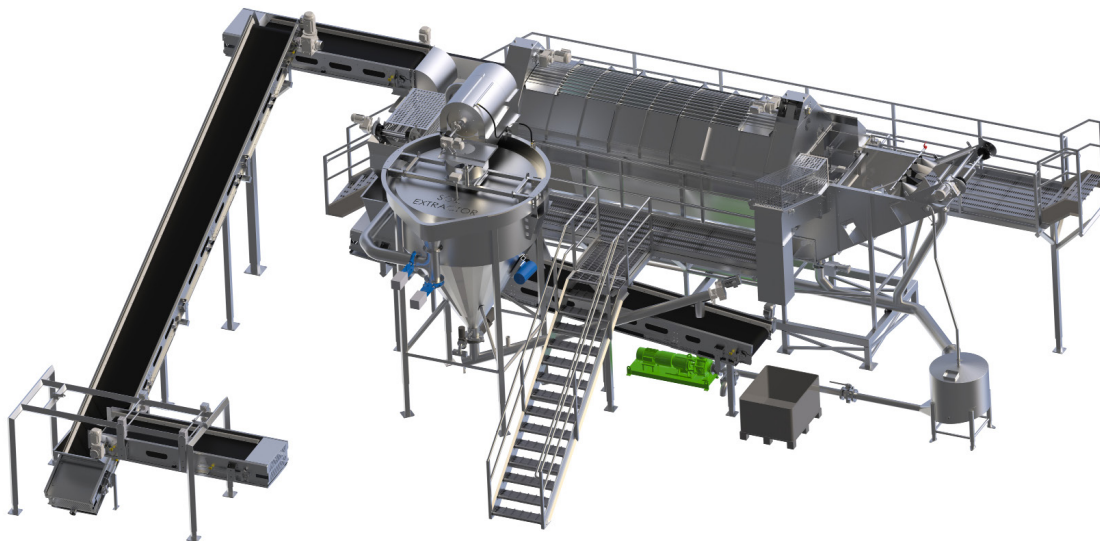

U.S. Patent No. 10, 112, 116
